BLUE WHITE

ALMOND

BRONZE

Our new black/black color offering will be fully extruded black throughout the entire window. To prevent color fading, we will then be adding a high performance, Renolit FPX laminate layer, to the exterior of the window. This laminate is designed to endure the conditions of the North East climate zone; ranging from sun exposure to freezing temperatures plus more. Renolit FPX laminate is built utilizing high performance UV protectants to protect against color fading. Our laminate windows will be warrantied against color fade, chipping, peeling, blistering, & rotting for 20 years!
